

About React JS Training with FLUX and Redux Architecture

React JS Training with FLUX and Redux Architecture tutorial course covers the fundamental concepts. React.js creates its own virtual DOM where your components actually live. This virtual DOM approach gives enormous flexibility and amazing gains in performance because React.js calculates what changes need to be made in the DOM beforehand and updates the DOM tree accordingly.

React JS Training with FLUX and Redux Architecture, Discover JSX (and the ES6 features that come along with it), creating React custom components, integrating React with jQuery UI / Bootstrap components and learn how to iterate React into an existing codebase in this course.

1. Introduction to React Js.(1 Day)

- Core concepts : React JS Training with FLUX and Redux Architecture
- Why many organizations preferring React over angular
- Main pillars of react

2. React Flux- Development Environment Setup

3. Building a React.js component(5 Days)

- Break down component in react way
- Props
- States
- Events
- setInitialprops
- supply default state
- Acces user data

4. Parent and child component Communication(3 Day)

- Core concepts
- Uses of function delegation
- Use of attributes as props

5. Validation(2 Day)

- Apply constraints on props/state and validate those
- Apply Regex

6. Routing(1 Day)

- Dynamic routing
- Set default route

7. ReactFire(2 Day)

- React+FireBase
- CRUD using Firebase

8. Transition in React

9. Access REST APIS in react (3 days)

- Use of Axios
- Advantages of Axios over \$Jwuery
- Promise chaining,promise all,promise cascading in Axios

10. ES6 and react(1day (Optinal))

- How to migrate reactJs code to ES6 compatible
- Use of ES6 features in react component.

Project Work

Towards the end of the course, you will get a chance to work on a live project.

 Message us in Electronic Voting System(EVS).
